

# Prevent Pollution and Only Let Rain Down the Drain!

When it rains, the water flows down the street into storm drains which go to the creeks where the fish live. Everything that goes down the drain ends up in the creek and can pollute the water. Be kind to the fish and keep trash out of the storm drain!

Connect the dots to reveal a stormwater pal!

Help The Dump Sort Each Piece of Trash!

Always throw your trash away and never toss it in the creek! All of your trash gets sorted at the dump to collect recyclable materials. Food scraps are turned into compost which feeds plants. Metal and plastic are turned into new things.
